

ENVIRONMENTAL MANAGEMENT

Supply chain pressures; improved profile with customers; improved environmental risk management; cost savings; a commitment to environmental improvement – these are just some of the reasons for developing and implementing Environmental Management Systems.

Phlorum offers specialist environmental management services to industrial and commercial clients. Our in-house IEMA qualified auditors can assist in the environmental auditing of companies and sites. Our staff have extensive experience in providing the following:

- Waste audits
- Energy/carbon audits of development projects
- Contamination audits
- Water usage audits
- Environmental risk audits
- Audits of environmental management systems
- Environmental compliance audits
- Review of environmental training requirements

Environmental permits are required for the operation of a variety of installations, waste operations and mobile plants including but not limited to industrial and waste processes, waste incinerators, operations of large combustion plants, water discharge consents, groundwater authorisations and radioactive substances.

Phlorum provides specialist and comprehensive environmental management services to industrial and commercial clients in the development, installation and auditing of Environmental Management Systems (EMS); the application of environmental permits; site waste management plans; and the review of environmental Corporate Social Responsibility (CSR) programmes.

Phlorum has extensive experience in supporting companies in improving their environmental performance through:

- Initial environmental "gap" style analysis
- Identifying key environmental issues
- Environmental audits of sites, systems and/or companies
- Development of environmental policies/procedures/registers
- Development of Environmental Management Systems (EMS)
- Creation of CSR policies/procedures

OTHER SERVICES INCLUDE

- Japanese knotweed eradication
 - Air quality
 - Ecology
- Contaminated land
- Environmental services for construction
